Job announcement

Research Scientist in

Experimental Psychology/Cognitive Neuroscience

to direct research on brain plasticity and rehabilitation/psychotherapy and teaching medical students in the German language. As a group leader you will supervise two technician and currently three doctoral students and develop an active research program. The position is funded by the University of Magdeburg.

We are an interdisciplinary, international team of psychologists, biologists and software engineers working in an exciting field of neuroscience aimed at characterizing and treating vision loss and blindness by means of neuromodulating brain plasticity. We use behavioral training and non-invasive brain stimulation to image and modulate brain functions with modern technologies such as EEG, eye tracking and vascular imaging techniques. We offer a cooperative and productive working environment and provide support for continued education, participation in international conferences and research cooperation with leading national and international collaborators. Many of our graduates have obtained jobs in first-rate Universities and research institutions.

You have a PhD or equivalent in Psychology, (cognitive) neuroscience, or related field and are able to teach in German. You know how to supervise doctoral students, have experience in publishing in scientific journals and can work independently, with a burning desire to succeed.

Please send your application to: Prof. Bernhard A. Sabel, PhD, Institute of Medical Psychology, Otto-v.-Guericke University of Magdeburg, Germany; imp@med.ovgu.de
