

50% E13 Position

01.10.2020-30.06.2021

Due to a short-noticed personnel change, from Oct 1, 2020 onwards I will have a temporary 50% E-13 position available in my group until June 30, 2021.

The position would be associated with teaching one development (or aging) cognitive neuroscience seminar in SS2021 and help with data collection (behavioral and/or EEG) in my group during WS2020. The applicant should have at least a master's degree. Do you know of anyone who such a temporary position may be helpful (e.g., a person finished master's degree but still trying to find a suitable PhD position, or a person has a postdoc position, but parts of the grant just run out).

Currently I cannot offer the position for a longer term, because I envision that I will need the position for other members in my team when our other grants will run out by next June. However, there is also possibility of extending this, if a few ongoing grant applications will come through.
