A) Hiwi position for assisting in data collection, recruitment, project management tasks (behavioral measurements, cognitive training, 7T MRI)

We would like to hire a research assistant as soon as possible, preferably with a background in cognitive/clinical neuroscience, psychology, medicine, biology, or relevant fields.

The workload will be on:

- Data collection: neuropsychological tests (behavioral measures), assisting in a cognitive training session, 7T MRI
- Recruitment, project management tasks

Populations to work with:

- Healthy older adults (60-79 years), young adults (18-34 years)

Skills required:

- Fluent knowledge of German and English is required.
- Good communication, ability to work in a team and interact with older / young adults
- reliability & competency in managing administrative and recruitment tasks independently

Interest or experience in cognitive (e.g. human memory) or clinical (e.g. neuropsychology, cognitive assessment) neuroscience, psychology-medicine, or neuroimaging is a plus.

Working hours: 6-8 hours per week. Can be discussed further in the interview.

Minimum duration: 7 months. It can be renewed based on demands and availability.

The candidate will be working for the IKND (Institute of Cognitive Neurology and Dementia Research), in a project focused on memory, cognitive training, vision and neuroimaging (7T MRI, MEG)
